

# Options Mastery Course

---

## Purpose of the Course:

To teach traders a systematic way to extract profit from the stock market using options on a daily and weekly basis. Following this course, traders will know how to identify an edge in the market, and how to develop a trade plan to take advantage of asymmetrical risk:reward opportunities. This trading approach is based on price action, so it can be used for futures and stock trading as well. Traders will also know how to review their trades, find mistakes, and update their system as the market environment shifts.

## Specific objectives:

- How to find a high probability trade setup
- How to set your risk and price targets
- What options to use and avoid
- Identify areas of supply and demand on a chart
- What indicators are best, and why you don't need them
- The "RADMILK" framework for identifying and trading an high probability opportunity
- How to create a trading playbook and why it is important
- How to review trades and extract value from your losers
- How to create a trading system, and when to modify it based on data
- How to identify market shifts

## Schedule:

This is a learn at your own pace online course. All videos are recorded and hosted on the website, and you can access them at anytime.

## Educator:

This course is presented by the founder of Opinicus, Kyle Janas. He specializes in intraday options trading via technical analysis, and favors momentum trades. The methods and systems in this course are what he has used to trade profitably for over 6 consecutive years.
